

Index of abstracts (alphabetical by first author)

- Abdulla T et al:** Hybrid Modelling of in vitro Epithelial to Mesenchymal Transition. Abstract 136
- Adeniran I et al:** Functional Effects of the Short QT Syndrome Variant Gene Mutations on the Electrical and Mechanical Function: Insights from Modelling. Abstract 72
- Albayati M et al:** Identifying patient safety improvement for surgical simulation: towards modelling an error-free endovascular operating theatre. Abstract 7
- Alexopoulos A et al:** An Integrated Multi-Scale Multi-Physics Computational Model of the Respiratory System. Abstract 45
- Amatruda C et al:** Contribution of mechanical and fluid response to in-stent restenosis. Abstract 40
- Anguita D et al:** A tool for training effective classifiers in the small sample setting. Abstract 56
- Aslanidi O et al:** Multi-scale integrative computational model of pulmonary veins: Studying arrhythmogenic substrate for atrial fibrillation. Abstract 39
- Bayley M et al:** A vision for supporting future VPH activities through resources developed within the VPH network of excellence. Abstract 62
- Bayley M et al:** VPH tools in clinical education: development of an Education Engine. Abstract 27
- Benson A P et al:** A validated and optimised model linking muscle and pulmonary oxygen uptake kinetics. Abstract 102
- Benson N et al:** Application of integrative modelling to the clinical development of fatty acid amide hydrolase (FAAH) inhibitors for pain. Abstract 15
- Bernabeu M O et al:** Shock-induced arrhythmogenesis in the human heart: a simulation study. Abstract 133
- Bernabeu M O et al:** Towards quantifying the impact of blood rheology model on shear stress estimates throughout the cardiac cycle. Abstract 36
- Bhattacharya-Ghosh B et al:** From Cell to Heart: A Multi-scale Lumped Parameter Model of the Cardiovascular System. Abstract 67
- Bleuze B et al:** A Horizontal Data Fusion Toolbox: Putting the focus on interoperability. Abstract 129
- Boccia E et al:** Wave transmission in a three-dimensional nonhomogeneous viscoelastic brain model. Abstract 48
- Bonnechère B et al:** From a Foundational to a Functional Model of Anatomy; A multiple systems ontology model of the lower limb. Abstract 98
- Bozkurt S et al:** Improving the Pulsatility in a CF-LVAD Supported Cardiovascular System Applying a Model Control to CF-LVAD Flow Rate. Abstract 17

- Burrowes K et al:** Computational models of the airways to unravel the pathophysiological mechanisms in asthma and COPD (AirPROM). Abstract 89
- Butters T et al:** Development of a 3D Computational Sheep Atria for the Study of Atrial Fibrillation. Abstract 55
- Cano I et al:** SYNERGY-COPD: Abnormal O₂ transport/O₂ utilisation leads to high mitochondrial ROS generation and systematic effects in COPD patients with poor prognosis. Abstract 125
- Carenini M et al:** VPH2: Extracting knowledge from integrated data. Abstract 3
- Carlier A et al:** A multiscale model of sprouting angiogenesis during fracture healing. Abstract 28
- Chain B et al:** The immune system as a biomonitor : explorations in innate and adaptive immunity. Abstract 84
- Chang D C-W et al:** AHE and ACD: A gateway into the grid infrastructure for VPH-Share. Abstract 35
- Colman M et al:** Multi-scale integrative computational model the human atria and torso: a platform for the investigation of atrial fibrillation. Abstract 73
- Colombo G et al:** A Digital Patient for prosthesis design. Abstract 29
- Cooper J et al:** Virtual experiments for reusable models. Abstract 101
- Cosentino D et al:** Risk stratification for stent fracture prediction in percutaneous pulmonary valve implantation through patient-specific finite element analysis. Abstract 80
- Courbebaïsse G et al:** A collaborative online system dedicated to the study of intracranial aneurysms. Abstract 16
- de Bono B et al:** Ontology-based knowledge management for clinical data and pharmaceutical modelling: applying the RICORDO and ApiNATOMY toolkits for drug development. Abstract 68
- Decorato I et al:** Simulation of the fluid-structure interactions after balloon-angioplasty and stenting treatment in a stenosed arteriovenous fistula geometry. Abstract 6
- Derks G et al:** Predicting rebound for mAbs using the TMDD model. Abstract 139
- Domínguez Hüttinger E et al:** Multi-scale modelling of epithelium homeostasis. Abstract 65
- Dordoni E et al:** Fatigue behaviour of Nitinol peripheral stent: finite element analyses of in vivo loading conditions. Abstract 60
- Dua P et al:** A Quantitative Systems Pharmacology model of the nerve growth factor (NGF) pathway to aid drug discovery and development. Abstract 70
- Dumas R et al:** Simultaneous prediction of musculo-tendon, joint contact, ligament, and bone forces in the lower limb during gait. Abstract 14
- Evison F et al:** A case study demonstrating VPH-NoE guideline compliance: Exercising the toolkit guidelines for a simple graphical tool. Abstract 51

- Feipel V et al:** Multi-institutional graduate programme for Virtual Physiological Human scientists. Abstract 111
- Gennari J et al:** Discovering model-model connections in biological model repositories. Abstract 135
- Glatard T et al:** A virtual imaging platform for the Virtual Physiological Human. Abstract 64
- Golebiewski M et al:** Access to reaction kinetics data: The SABIO-RK database. Abstract 119
- Gomez-Cabrero D et al:** A-model, a deep look into the atherogenesis onset. Abstract 95
- Gomez-Cabrero D et al:** Neuroswarm: a methodology to explore the constraints that function imposes on simulation parameters in large-scale networks of biological neurons. Abstract 92
- Graf N et al:** p-medicine – From data sharing and integration via VPH tools to personalized medicine. Abstract 81
- Groen D et al:** A distributed infrastructure for multiscale biomedical simulations. Abstract 18
- Grosdidier S et al:** Exploring the Disease of COPD and its associated diseases. Abstract 42
- Haidar A N et al:** EUDAT: a collaborative data infrastructure supporting the Virtual Physiological Human initiative. Abstract 91
- Hall B et al:** Elucidating the Origin of Resistance in HIV-1 Protease Using Atomistic Simulation. Abstract 127
- Hapuarachchi T et al:** Modelling blood flow and metabolism in the preclinical neonatal brain during physiological insults. Abstract 53
- Hoehndorf R et al:** A translational medicine approach to orphan diseases. Abstract 12
- Hoehndorf R et al:** Integration of knowledge for personalized medicine: a pharmacogenomics case-study. Abstract 13
- Jefferys B et al:** Challenges in data warehousing for personalised medicine. Abstract 110
- Jimenez-Castellanos A et al:** Building sustainable capacity for research for health in Africa: first stages of the AFRICA BUILD Project. Abstract 46
- Kohout J et al:** Fibre-based models of muscle wrapping. Abstract 19
- Kohout J et al:** Technologies for modelling fibrous muscle in motion. Abstract 20
- Koss H et al:** Multiscale modelling of P2Y11, a receptor involved in heteromeric GPCR signal transduction. Abstract 121
- Land S et al:** Developing a Virtual Physiological Mouse model of the heart: Multi-scale coupling is key for controlling ventricular pressure. Abstract 109
- Lees J et al:** Visualisation and target prioritisation using computational and experimental omics datasets in human. Abstract 11

- Li V *et al*:** Integration of glucose and lipid metabolism: In silico models of adipose tissue and blood. Abstract 61
- Li Y *et al*:** Experimental and numerical simulation study of the near-hinge flow field of a bileaflet mechanical heart valve. Abstract 83
- Lio P *et al*:** Comparing the effects of viral (Hiv) and bacterial infection (Staphylococcus aureus) in bone dynamics. Abstract 115
- Liu H *et al*:** Multi-scale biomechanical modeling and energy loss evaluation of aortic aneurysm. Abstract 103
- Lorenzi M *et al*:** Differentiating pathological brain atrophy from normal aging: a promising diagnostic tool for Alzheimer's disease. Abstract 122
- Lötjönen J *et al*:** PredictAD – From Patient Data to Personalised Healthcare in Alzheimer's Disease. Abstract 113
- Lötjönen J *et al*:** Generic evidence-based disease profiling for predicting outcomes: Application to Alzheimer's disease and Traumatic Brain Injuries. Abstract 116
- Lotti M *et al*:** An automated procedure based on Computer Fluid Dynamics to evaluate risk on abdominal aortic aneurysm. Abstract 96
- Ma X *et al*:** Best practice for multiscale visualisation in VPH. Abstract 57
- Malandrino A *et al*:** Mechanical Effect on Cell Viability in Healthy and Degenerated Intervertebral Discs. Abstract 50
- Mancini E *et al*:** HIV reservoirs and immune surveillance evasion cause the failure of structured treatment interruptions: an in silico clinical trial. Abstract 21
- Manini S *et al*:** Validation of patient specific multi-scale hemodynamic computational model for planning vascular access surgery in hemodialysis patients. Abstract 33
- Martelli Y *et al*:** A software framework for reconstructing the proximal femur from dual-energy x-ray absorptiometry and assessing the risk of fracture. Abstract 41
- Medvedev A *et al*:** Discrete-continuous Mathematical Modeling of Endocrine Systems with Pulsatile Secretion. Abstract 107
- Meoli A *et al*:** Comparison of different in vitro testing conditions for peripheral Nitinol stents: a computational study. Abstract 59
- Mertzaniidou T *et al*:** Relating findings between breast MR images and X-ray mammograms: A validation study on clinical cases. Abstract 25
- Mikhal J *et al*:** Development of an Immersed Boundary Method for Pulsatile Flow Predictions in Cerebral Aneurysms. Abstract 5
- Mitton D *et al*:** Subject-specific bone mechanical properties: is there an alternative to X-rays modalities? Abstract 90

- Morlacchi S et al:** Patient-specific virtual simulations of stenting procedures in coronary bifurcations. Abstract 54
- Moss R et al:** A multi-nephron model of whole-kidney function for simulation of renal pathologies and blood pressure regulation. Abstract 58
- Mountrakis L et al:** Modelling the transport behaviour of platelets in intracranial aneurysms. Abstract 88
- Nallamothu R K et al:** A Multi-physics model of the Ventricular valve-valve interaction. Abstract 30
- Nelson M et al:** Colorectal crypt formation in vitro & in silico: elucidating the role of cellular growth upon tissue-scale buckling. Abstract 24
- Nestola M G C et al:** Three Band Analysis in a FSI model of aorta. Abstract 49
- Neufeld E et al:** Sim4Life: A medical image data based multiphysics simulation platform for computational life sciences. Abstract 43
- Neufeld E et al:** The 'Virtual Population': detailed, whole-body anatomical models based on medical image data. Abstract 38
- Obiol-Pardo C et al:** Multiscale simulation in the prediction of drug-induced cardiotoxicity: Integrating molecular, cellular and tissular levels. Abstract 69
- O'Donoghue D et al:** Mathematical model of ion transport in human nasal epithelia: Investigating the pathogenesis of Cystic Fibrosis in silico. Abstract 97
- Ojeda D et al:** Sensitivity analysis and parameter estimation of a coronary circulation model for patients with triple vessel disease. Abstract 124
- Orlowski P et al:** Modelling of the Physiological Response of the Brain to Stroke. Abstract 108
- Otsuki Y et al:** Cardiovascular Flow Simulation by Correlation based Optical Flow. Abstract 105
- Owen M et al:** Vascular Tissue Modelling Environment. Abstract 9
- Park C S et al:** Estimating changes to brain oxygenation delivery through multi-scale modelling of the cerebral microvasculature. Abstract 77
- Pavarino L et al:** 3D Bidomain modeling of cardiac virtual electrode pacing. Abstract 106
- Pedersen M G et al:** Multiscale modeling of insulin secretion. Abstract 142
- Pervolaraki E et al:** Architecture, antenatal activity and arrhythmia of the human foetal heart: a computational database. Abstract 75
- Pettersen K H et al:** Quantifying the relationship between hypertension and age-related baroreflex dysfunction. Abstract 34
- Planes X et al:** MultiScale exemplary problems. Abstract 37
- Ralovich K et al:** Hemodynamic Assessment of Aortic Coarctation from MR Images. Abstract 130

- Roehrle O et al:** A Novel Mathematical Homogenisation Technique to Link Tissue Scale Properties of the Intervertebral Disc to Whole Organ System Simulations of the Lumbar Spine. Abstract 44
- Ruiz C et al:** Mesh convergence is affected by poroelasticity in multi-tissue intervertebral disc models. Abstract 52
- Sakkalis V et al:** The TUMOR project: integrating cancer model repositories for supporting predictive oncology. Abstract 99
- Samei G et al:** Advantage of a Patient-Specific Respiratory Motion Model for the Liver. Abstract 114
- Selimovic A et al:** Investigating the correlation between pulsatile-flow hemodynamics and aneurysm growth: a patient-specific, CFD study. Abstract 1
- Sette M et al:** Smart Catheterization project. Abstract 137
- Shim E B et al:** Patient-Specific Identification of Optimal Placement of Ubiquitous ECG using a 3D Heart Model. Abstract 132
- Shim E B et al:** An integrative model of heart and coronary circulation to delineate the effect of coronary occlusion on heart eleDiscovering model-model connections in biological model repositoriesctric conduction. Abstract 134
- Shublaq N et al:** A 'Digital Me': Key to implementation. Abstract 93
- Silva D et al:** Developing a workflow system that integrates scientific development. Abstract 2
- Soleimani S et al:** Effects of applied pressure and clot viscosity on aspiration catheter performance. Abstract 8
- Spranger K et al:** Comparison of computational methods for simulating stent deployment. Abstract 94
- Stachowska-Pietka J et al:** A spatially distributed approach of intraperitoneal fluid kinetics combined with its transport through the interstitium during peritoneal dialysis. Abstract 118
- Stamatakis G et al:** In silico oncology: a novel and explicit numerical treatment of the Neumann boundary conditions imposed by the skull on a multiscale diffusion-reaction model of glioblastoma growth: clinical validation aspects. Abstract 4
- Stenzhorn H et al:** ObTiMA - an ontology-based application for managing clinico-genomic trials. Abstract 79
- Strbac V et al:** An implementation of a real-time finite element algorithm using CUDA technology with application to Endoclamp Balloon expansion. Abstract 138
- Sutton K et al:** Multiscale modelling of Chlamydia trachomatis infection. Abstract 100
- Tahir H et al:** Modelling the influence of re-endothelialization on in-stent restenosis. Abstract 85
- Takagi S et al:** Multiscale Simulation on the initial stage of thrombus growth. Abstract 120

Talbot H et al: Interactive Electromechanical Model of the Heart for Patient-Specific Therapy Planning and Training using SOFA. Abstract 63

Tankaria M et al: Multiscale modelling of delta-notch pathways. Abstract 31

Tauriello G et al: Multiscale Simulations of Morphogenesis. Abstract 123

Testi D et al: Hypermodelling technology for multiscale simulations. Abstract 23

Testi D et al: Spatial and temporal multiscale interactive visualization: two prototypes. Abstract 87

Testi D et al: VPH challenges: a solution to interactive visualisation of biomedical data. Abstract 26

Testrow C et al: A mathematical model of the electrical and mechanical activity of the uterine cell. Abstract 74

Toumanidou T et al: A novel active lumbar spine muscle model. Abstract 117

Tripoliti E et al: Training scenarios for vascular surgeons of peripheral arteries. Abstract 140

van Riel N et al: Modelling progressive metabolic diseases with parameter transition trajectories. Abstract 47

Van Sint Jan S et al: seedEP2 : Integrated modelling of the musculoskeletal system. Abstract 104

Varma S et al: Building a shared data infrastructure: a narrative. Abstract 78

Varma S et al: VPH-Share: Embodying a Patient Avatar for Computational Workflows. Abstract 131

Varma S et al: VPH-Share: Patient-Centred Multi-scale Computational Workflows. Abstract 128

Vicente D et al: Towards a European collaborative data infrastructure. Abstract 32

Vigueras G et al: GPGPU Accelerated Cardiac Electrophysiology in the Human Heart. Abstract 66

Vik J O et al: A toolbox for causally cohesive genotype-phenotype modeling. Abstract 112

Villa-Uriol M-C et al: Composition and migration to the cloud of the @neurIST workflow in VPH-Share. Abstract 141

Vozi F et al: Patient-specific prediction of coronary plaque growth from CTA angiography: a multiscale model for plaque formation and progression. Abstract 22

Wahba K et al: Identification of mechanistic differences in a virtual population contributing to variation in response to simulated statin therapy. Abstract 71

Wang G et al: Analysis of local and global Hemolysis Index in 2D velocity field of regurgitant flow in mechanical heart valve. Abstract 82

Winchester L et al: Integrated analysis of copy number aberrations for primary breast cancer tumours in the HER2 region, miRNA and mRNA expression. Abstract 76

Wright D et al: Multiscale Modelling of the Interplay Between Global and Local Structural Changes in Viral Drug Target Proteins. Abstract 126

Zahedmanesh H *et al*: A multiscale mechanobiological model of in-stent restenosis. Abstract 86

Zwierzak I *et al*: Three dimensional optical reconstruction method for stent geometry characterisation; data validation using micro CT technique. Abstract 10
